

Clean Burn Waste Oil Furnaces

Volume 2, Issue 10

ECO HEATING SYSTEMS, INC.

December 2013

Preventative Maintenance Thoughts For You

Don't run out of fuel: It has been our experience that on average, 70% of new customer issues stem from poor fuel management. We recommend you keep a minimum of 20" of oil in your tank at all times. *Diligently keep contaminants out of your supply.*

Air Compressor: Always leave your air compressor running overnight.

Avoid Frozen Air Lines: If you do not have operating compressor air, your Clean Burn furnace will not operate. There are two things you can do to prevent water in your air lines.

- 1) *Install air dryers on your air compressor system and make sure the air dryers are operating.*
- 2) *Install an automatic water eliminator at the air compressor.*

Welcome to the Clean Burn Family!

Our schedule exploded this month. Here are a few of the jobs we have been busy working with:
Passport Toyota in Marlow Heights, MD installed a CB5000;
K. Neal International Truck Inc. in Hyattsville, MD installed a CB3500;
Eric Handzo from Centreville, DE installed a CB2500 in his home shop;
Ressler's Automotive in Salunga, PA installed a CB2500;
Preferred Automotive in Georgetown DE installed a CB2500;
Choptank Electric Co-op in Denton, DE installed a CB3500; and
Bud Rickwood in East New Market, MD installed a CB3250.

Section 179 deduction limit for 2013 is \$500,000. Speak with your Accountant to learn how Section 179 benefits YOU by deducting the full purchase price from your gross income (up to \$500K).

Success Story for the Past 15 Years

Foster's Auto Service in North East, Maryland installed a Clean Burn in 1998. Since that time, they have saved more than \$60,000 and have put over 15,000 hours on their waste oil furnace. Having the maintenance done on a regular schedule has kept the unit in great shape.

Steve Foster was quoted as saying, "At 14 years old, this furnace is a workhorse and is still going strong! Our shop stays warm and my employees stay happy. Eco Heating Systems cleans our furnace for us annually, and I have to say they do a great job. They are professional and efficient, and I can always get help over the phone or on-site when I need it. "

Contaminants in your Waste Oil Supply Tank

Have you experienced this? *Black smoke, weak spark, doesn't want to burn properly, or unit keeps shutting itself down.*

Hints like that can help us identify that you have contaminants in your waste oil supply tank.

The contaminants could be water, antifreeze, sludge and "new" motor oil. You may need to hire a waste oil hauler to remove them from your waste oil supply.

Fall/Winter hours: Monday-Friday, 8:00-5:00.
